

Cleaning & Maintenance Instruction

1) Basic Care

In order to prolong the life of our products, to prevent the accumulation of dirt and contamination and to prevent permanent stains, we recommend cleaning without waiting for dirt or stains.

Any care and cleaning process, which is carried out with improper material, without paying attention to the washing, dry cleaning or ironing rules, shortens the life of the products.

Avoid placing any objects with extreme temperatures on the products and avoid direct contact with the iron. Care should be taken to keep products away from devices such as direct heat emitting electric heater, infrared heater or solid fuel stove etc.

Clean the sweat that may accumulate in the places where the product contacts sweat, especially in summer, in the same way, without delay. Visible, loose dirt can be removed with a vacuum cleaner with a soft brush. Do not use any broom with a hard brush on the product surface.

Özellikle yaz aylarında ürüne temas edilen yerlerde birikebilecek teri yine aynı şekilde bekletmeden temizleyiniz. Görülebilir, serbest haldeki kirler yumuşak fırçalı elektrik süpürgesi ile alınabilir. Sert fırçalı hiçbir süpürgeyi ürün yüzeyinde kullanmayınız.

Products should be used by protecting them from chemicals such as hair spray, perfume, cologne etc.

Do not leave marks on the product with pens or felt-tip pens, the product may absorb ink and permanent staining may occur.

Do not expose the products to direct sunlight. The direct days of the products exposure to light may cause discoloration and deformation of the product.

2) Cleaning

The stain in contact with heat, light and air becomes permanent and difficult to remove. For this reason, clean the stain as soon as it occurs, without allowing it to dry. Otherwise, the stains will be difficult to clean and may leave permanent marks.

Clean the entire surface in a circular motion using liquid hand soap and water (1-unit soap to 9 units of water). Rinse and wipe with a clean, damp white cloth to get rid of excess soap. Repeat as needed and let dry.

In order to remove the stain, care should be taken not to over-wet the fabric and not to maltreat during wiping. Washing should not be carried out on fabrics with stain-proof, non-flammable properties, and local cleaning should be carried out.

The spilled liquid shall be taken from the fabric surface with a highly absorbent material without pressing. In the second time, the remaining moisture is removed by pressing lightly with clean and dry material (cotton cloth, paper towel, etc.)

If the liquid leaves a stain, it is cleaned by soap and a clean cotton cloth without spreading the stain. After each rubbing, the face of the soapy cloth that does not come into contact with the stain should be turned and care should be taken not to allow the stain to go back to the fabric. The product should not be used before it dries.

For stains that can be melted by heat, such as gum stains, put some ice in a bag and leave the bag on the product for a few minutes. Lift the bag and remove any cold hardened gum or similar residue gently.

If you need to disinfect because contact of coated fabrics with organic matter (blood, urine or fecal matter);

a) Clean with a clean white cloth or fabric. If you choose to use a bleach solution, use only a 0.5% concentration that can be prepared by diluting as follows: Dilution: 10 units of water for 1 unit of bleach

b) Rinse and wipe with a clean damp cloth or fabric to get rid of any excess

c) Wait until drying.

d) Incorrect application of this method may lead to bleaching in the product colors.

Cleaning agents containing following substances shall not be used for cleaning purposes:

Never use solvents such as thinners, varsols, acetone, bleaches, waxes, alcohol-containing, chlorine-based, silicones, or cleaning products that are not detergents and/or pH neutral.

Do not Forget:

It is worth noting that this instruction by itself is not a guarantee. It contains recommendations for the correct use and cleaning of our products. Users are responsible for the safe use and cleaning of products with products that do not affect the surface, composition, or therefore its performance and lifetime. It is recommended to try the application methods on the invisible points of the product before use.

Cleaning results may vary depending on the size of the stain, the cleaning product used and the exposure time of the surface.

Some clothing items (such as jeans, microfiber, and dark fabrics) can transfer their color to products due to dry cleaning methods. This happens at high humidity and temperatures and is irreversible. Flokser is not responsible for any damage caused in this way.
